

ABSTRACT**Method for reprocessing accumulator or battery packs**

5

Method for reprocessing of rechargeable accumulator or battery packs including testing, replacing, tuning, providing individual special types and charging accumulators in a store or in the framework of an independent service by using a special service station. The method includes the provision of service station

- 10 business partners, the provision of the central office for controlling the overall business procedures, and the provision of a product database. The central office controls the production of the service stations and the supply of the accumulators, batteries, or cells. In addition, the central office also controls the financing of the service stations for the service station business partners. The
- 15 method includes a complete system for reprocessing accumulator or battery packs.
